#### Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

- D1: US-A-2 573 750 (WHITE J.W. JR.) 6 November 1951
- D2: GB 397 714 A (CALIFORNIA FRUIT GROWERS EXCHA) 31 August 1933
- D3: DE 32 36 762 A (WEIHOFEN JUERGEN DIPL OEC TROP) 5 April 1984
- D4: US-A-5 260 083 (BRAIN CHARLES H ET AL) 9 November 1993
- D5: FR-A-2 700 245 (SOCIETÉ INDUSTRIELLE ET AGRICOLE DE BRETAGNE) 13 July 1994
- D6: FR-A-2 638 064 (GUILLAMOT GILBERT) 27 April 1990

The amendments fulfil the requirements of Art. 34(2)(b) PCT. The additional features brought into claim 1 may be found in the description, for instance in p. 1 line 21.

The novelty of the independent claim 1 and subsequent has already been acknowledged in the previous communication.

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and shows (the references in parentheses applying to this document) a process in which honey is employed as a sweetener.

The subject-matter of claim 1 differs from this known process in that a sweetener is added to the product and some other process parameters.

The objective problem would be the production of a fruit spread that does not contain added sugars (sweeteners, edulcorants). D1 does not address the problem of producing fruit spreads that DO NOT contain edulcorants and, thus, it does not provide the necessary hints to the skilled person to achieve the invention, instead it teaches him away. This is the case for the rest of the documents that are further away from this solution.

The subject-matter of the new claim 1 involves an inventive step in the sense of Art. 33(3) PCT.

# INTERNATIONAL PRELIMINARY EXAMINATION REPORT - SEPARATE SHEET

International application No. PCT/IB 02/05554

Claims 2 and 3 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty and inventive step.

### Re Item VIII

### Certain observations on the international application

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1-D6 is not mentioned in the description, nor are these documents identified therein. As the examiner is not allowed to carry out any amendments, no matter what minor these may be (R. 66.8(a) PCT), it is the task of the applicant to acknowledge these documents in the description part.

# DIUCIONG 170181 1/11/11/2/09554

#### Claims:

- 1.A process for preparing a fruit spread, characterized in that the process does not employ a sugar, sweetener, pectin or gums and comprises the steps of:
- (i) preparing fruit pulp by crushing fruits,
- (ii) incubating the pulp with 0.75-1.25% pectolytic enzyme of enzyme activity 1590 units/ml of PolyGalactouronse and 17.7 units/gm of Pectin Methyl Esterase at 27-40°C for a period of 20-40 minutes to allow the pulp to liquefy thereby lowering the viscosity of the pulp by 60-80%;
- (iii) heating the enzyme treated pulp to inactivate the enzyme with mixing to attain a temperature of 65-75°C followed by immediate cooling at room temperature of 27-30°C and filtration through muslin cloth to obtain strained fruit juice;
- (iv) concentrating the strained fruit juice by employing vacuum evaporation using thin film evaporator at a temperature of 40-45°C with system pressure of vacuum 22-24 inches to obtain a fruit juice concentrate having total soluble solids of 70-72°Brix;
- (v) incubating the fruit juice concentrate with 0.75-1.25% pectolytic enzyme of enzyme activity 1590 units/ml of Poly Galactouronse and 17.7 units/gm of Pectin Methyl Esterase at 27-40°C for a period of 20-40 minutes to reduce the viscosity of the fruit pulp by 30-50% and
- (vi) mixing 20 to 30% of the fruit juice concentrate with the fruit pulp of step (v) to obtain a mixture having total soluble solids content from 30-45°Brix, followed by boiling to obtain a fruit spread of 68-70°Brix.

(Art 34)

FROM K & S PARTNERS

2. A process as claimed in claim 1 wherein the fruits are selected from jack fruit, papaya, apple, banana, guava and Zizyphus mauritiana Lamk.

3.A process as claimed in claim 1 further comprising he step of subjecting the fruit juice concentrate of step (v) to vacuum concentration by using thin film evaporator at the temperature of 40-45°C with system pressure (vacuum 22-24 inches) to obtain high total soluble solids of 70-72°Brix.
